

Case study: Advance EMA

Current Price (Never exit will liquidate)

MACD CONCEPT & SETTING

MACD stands for Moving Average Convergence Divergence. It is a popular technical analysis tool used by traders and investors to identify potential buy and sell signals in financial markets, particularly in stocks and cryptocurrencies.

The MACD indicator consists of two lines: the MACD line and the signal line, along with a histogram.

Traders use the MACD indicator to identify potential bullish (buy) and bearish (sell) signals. Here are some common interpretations:

- 1. Signal Line Crossovers: When the MACD line crosses above the signal line, it is considered a bullish signal, indicating a potential buying opportunity. Conversely, when the MACD line crosses below the signal line, it is seen as a bearish signal, suggesting a potential selling opportunity.**
- 2. Zero Line Crossovers: When the MACD line crosses above the zero line, it indicates a shift from negative to positive momentum, signaling a potential buying opportunity. Conversely, when the MACD line crosses below the zero line, it suggests a shift from positive to negative momentum, indicating a potential selling opportunity.**
- 3. Divergence: Traders also analyze the divergence between the MACD indicator and the price action. Bullish divergence occurs when the price makes lower lows while the MACD indicator makes higher lows, suggesting a potential trend reversal. Bearish divergence occurs when the price makes higher highs while the MACD indicator makes lower highs, indicating a potential trend reversal.**

It's important to note that while the MACD indicator can be a useful tool, it should not be used in isolation. Traders often combine it with other technical indicators and fundamental analysis to make well-informed trading decisions.

Volume concept & setting

Volume Indicator	Explanation
Confirmation of Price Movements	Increased trading volume confirms the price trend. Higher volume during an uptrend indicates increased buying interest, while higher volume during a downtrend suggests increased selling pressure.
Volume Breakouts	Volume surpassing a threshold or exceeding average volume can indicate the initiation or continuation of significant price moves.
Volume Divergence	Divergence occurs when the price makes new highs or lows, but the accompanying volume fails to follow. This can indicate weakening of the prevailing trend and potential reversal.
Volume Patterns	Analyzing volume patterns, such as volume spikes or clusters, can help identify potential turning points or areas of support and resistance.

The volume indicator is used to assess the level of activity and liquidity in the market, providing valuable insights into price trends. Traders often combine volume analysis with other technical indicators and market factors to make informed trading decisions.

It's important to note that the interpretation of volume indicators may vary depending on the specific futures market and trading strategy. Additionally, volume indicators should be used in conjunction with other indicators and analytical tools to gain a comprehensive understanding of the market.

CASE Study 个案研究

@Like to kern Hello wanted to check with you guys. The appearance of a hollow bar in a ...

Jasper Sia 22/04/2024 18:11

Why the hollow bar of MACD histogram is being caused by the counter volume (different buying&selling = contraindication). MACD supposingly down trend by red bar but is counter pump by strong buying volume from the market. If the trend of MACD is equal to the volume trend, then the bar of histogram will be the same solid colour.

为什么MACD直方图的空心柱是由反向成交量（不同的买卖 = 矛盾信号）引起的。MACD本来应该是红色的下跌趋势，但由于市场中强劲的买入量而反向上涨。如果MACD的趋势与成交量的趋势相符，那么直方图的柱子将是相同的实心颜色。之前aaron解说的😊

1

Case Study 个案研究

@eric818 volume两条线是不是和ema 25/55一样?

Jasper Sia 22/04/2024 12:27

不一样吧，沒注意那两条😅，主要看那个币有没有volume, 如果不活跃，即使其他条件美，没volume你也是一直卡着上下徘徊，很费时。

👍 2 💎 1

@kelvin63 Morning Dr aaron May I know where to get back my volume chart ? Cause just now I don't know what I press wrongly so I lost my volume chart (edited)

SMC (Smart Money Concept) (智能资金概念)

- ◆ In futures trading, the "Smart Money Concept" refers to tracking the actions of large, well-informed institutional investors who drive significant market movements. It assumes that these "smart money" players have access to better information and sophisticated analysis, so their trades are seen as more informed and predictive of future price trends. Traders using this concept look for institutional buying and selling patterns—such as price accumulations, manipulations, and liquidity grabs—to align their trades with the smart money's direction.
- ◆ 在期货交易中，“聪明资金”概念指的是追踪大型、信息丰富的机构投资者的行为，这些投资者通常会推动市场的重大波动。该概念假设这些“聪明资金”玩家拥有更好的信息和复杂的分析能力，因此他们的交易被视为更具前瞻性，能够预测未来的价格趋势。使用该概念的交易者会寻找机构买入和卖出模式，例如价格积累、操控和流动性抓取，以便将自己的交易方向与聪明资金的方向保持一致。

SMC (Smart Money Concept)

Smart Money Concepts	Definition
Supply Zone & Demand Zone	- Supply Zone: Area where selling pressure exceeds buying pressure, often leading to a potential price decrease. - Demand Zone: Area where buying pressure exceeds selling pressure, often leading to a potential price increase.
Fair Value Gap (FVG) or Imbalance	Represents the initial significant move in a new trend, indicating a potential entry point for Smart Money traders.
Weak High & Weak Low	- Weak High: A peak in price with limited buying interest, often signaling potential resistance. - Weak Low: A trough in price with limited selling interest, often signaling potential support.
Strong High & Strong Low	- Strong High: A peak in price with significant buying interest, suggesting a strong upward trend continuation. - Strong Low: A trough in price with significant selling interest, suggesting a strong downward trend continuation.
Choch (Change of Character)	Signals a shift in market sentiment or trend direction, often indicating a potential reversal in price movement.
BOS (Breakout or Breakdown)	Occurs when price breaches a significant support or resistance level, potentially indicating a shift in trend direction.
Equal High & Equal Low	- Equal High: Multiple price peaks occurring at the same level, indicating potential resistance. - Equal Low: Multiple price troughs occurring at the same level, indicating potential support.

Donchian Trend Ribbon (唐奇安趋势带)

- ◆ is a technical indicator used to display the trend of price movements. It is based on the **Donchian Channel indicator** and shows the direction of the trend over different time periods by plotting a series of colored ribbon-like areas on the chart. The purpose of this indicator is to help traders identify market trends more clearly and assist them in making corresponding trading decisions.
- ◆ 是一种技术指标，用于显示价格走势的趋势。它基于唐奇安通道指标，并通过在图表上绘制一系列彩色带状区域来显示不同时间段内的趋势方向。这种指标的目的在于帮助交易者更清晰地识别市场的趋势，并协助他们做出相应的交易决策。

Liquidation Heatmap (清算热力图)

- ◆ A **Liquidation Heatmap** is a visual tool used in trading, particularly in futures markets, to display areas where a high number of liquidations (forced selling or buying due to insufficient margin) have occurred or are likely to occur. This heatmap helps traders identify zones of high risk and potential price reversals, as heavy liquidations can lead to sudden price movements.
- ◆ Key features of a Liquidation Heatmap:
 1. **Color Coding**: Typically, colors indicate the intensity of liquidations—warmer colors (like red or orange) show high liquidation areas, while cooler colors (like blue or green) show low liquidation areas.
 2. **Clusters**: Shows clusters of liquidation events at specific price levels, which can signal where many traders are trapped, potentially leading to rapid price moves.
 3. **Support and Resistance Levels**: Frequently aligns with support and resistance zones where liquidations tend to cluster, providing insight into possible reversal points.
- ◆ Using a liquidation heatmap, traders can anticipate where liquidations might create volatility, helping them plan entries, exits, or avoid areas with high liquidation risk.

Trade Call- Case Study

Late Trade is a Lost Trade – if you don't know, don't try.

and yes, scalping is not for everyone- just like how not everyone can be doctors.
trading is about having a plan and u sticking to it- i'd say not to follow people's trade calls until u understand what exactly their plan is- that doesn't only apply to dr aaron's trade calls, but basically anyone's trade calls.

they have their own plan, when to enter, when to exit, and when not to take a trade- but u don't so- u need to make ur own analysis and see if it coincide's with theirs

👍 9 ❤️ 1 😊

- 12:38
Yes, it's a short call. Why Dr asks to long? He must need some therapy 🤔
- 12:43
That is a more sensible charting and analysis for \$ZETA 👍👍👍
👍 2 😊
Even for scalping 🖱️
Additionally, FR has no indication it will pump. It's only a hope to catch it early.
Dangerous scalping strategy using low TF. (edited)
- 12:55
thank leon but i dont trade, i wati for the FR to reset, sometimes the coin drop then i short then, made some decent profits

Trading Style & Risk Level

Aspect	Low Risk Trader	Medium Risk Trader	High Risk Trader
Open Interest (OI)	May consider for confirmation, but not primary focus	Consider changes in OI for insight into market sentiment	Monitor OI for quick insights into market direction
Technical Indicators	Relies on fundamental analysis and long-term indicators	Utilizes a mix of technical indicators for medium-term analysis	Focuses on short-term indicators for quick decision-making
Trading Style	Conservative and methodical, with a focus on capital preservation	Balanced approach with a mix of caution and opportunity	Aggressive and opportunistic, aiming for high returns

My tips of scalping Strategy

Set the Amount 1%-10% (appetite dependent)

Conservative -> Isolated , less leverage 1x-10x ,Set TP/SL

Aggressive/ Risk taker -> Cross, maximise leverage , NO TP / Set SL

Setting entry price with prediction.

Trading Style & Risk Level

Aspect	Low Risk Trader	Medium Risk Trader	High Risk Trader
Market Conditions	Low to moderate volatility and high liquidity	Moderate to high volatility and liquidity	High volatility and liquidity
Timeframe	Medium to long-term timeframes (e.g., daily)	Short to medium-term timeframes (e.g., hourly)	Short-term timeframes (e.g., 1-minute)
Entry Criteria	Strong confirmation signals, focus on long-term trends	Balanced approach with a mix of technical indicators	Quick entry based on short-term signals
Exit Criteria	Conservative profit targets and tight stop-loss levels	Moderate profit targets and wider stop-loss levels	Aggressive profit targets and looser stop-loss levels
Risk Management	Strict risk management, limited exposure per trade	Balanced risk management, adjust exposure based on volatility	Higher risk tolerance, larger position sizes

Trading Style & Risk Level

Aspect	Low Risk Trader	Medium Risk Trader	High Risk Trader
Trade Execution	Patient and deliberate execution, avoid impulsive decisions	Timely execution with attention to market conditions	Quick execution to capitalize on short-term opportunities
Monitor Trades	Regular monitoring with emphasis on long-term trends	Active monitoring with adjustments based on short-term indicators	Constant monitoring with quick adjustments
Psychological Discipline	Emotionally disciplined, focus on long-term goals	Balanced emotions with a focus on managing short-term risks	High tolerance for volatility, able to handle rapid changes

Risk Management + Hedge Your Position

- **Basic tool: Risk management strategy by trading style & risk level (Basic Dose)**
- **SSWB (Advance Dose)**
- **Advance tool: MMT Hedging (Discharge)**
- **MMT Golden Rules (Follow up)**

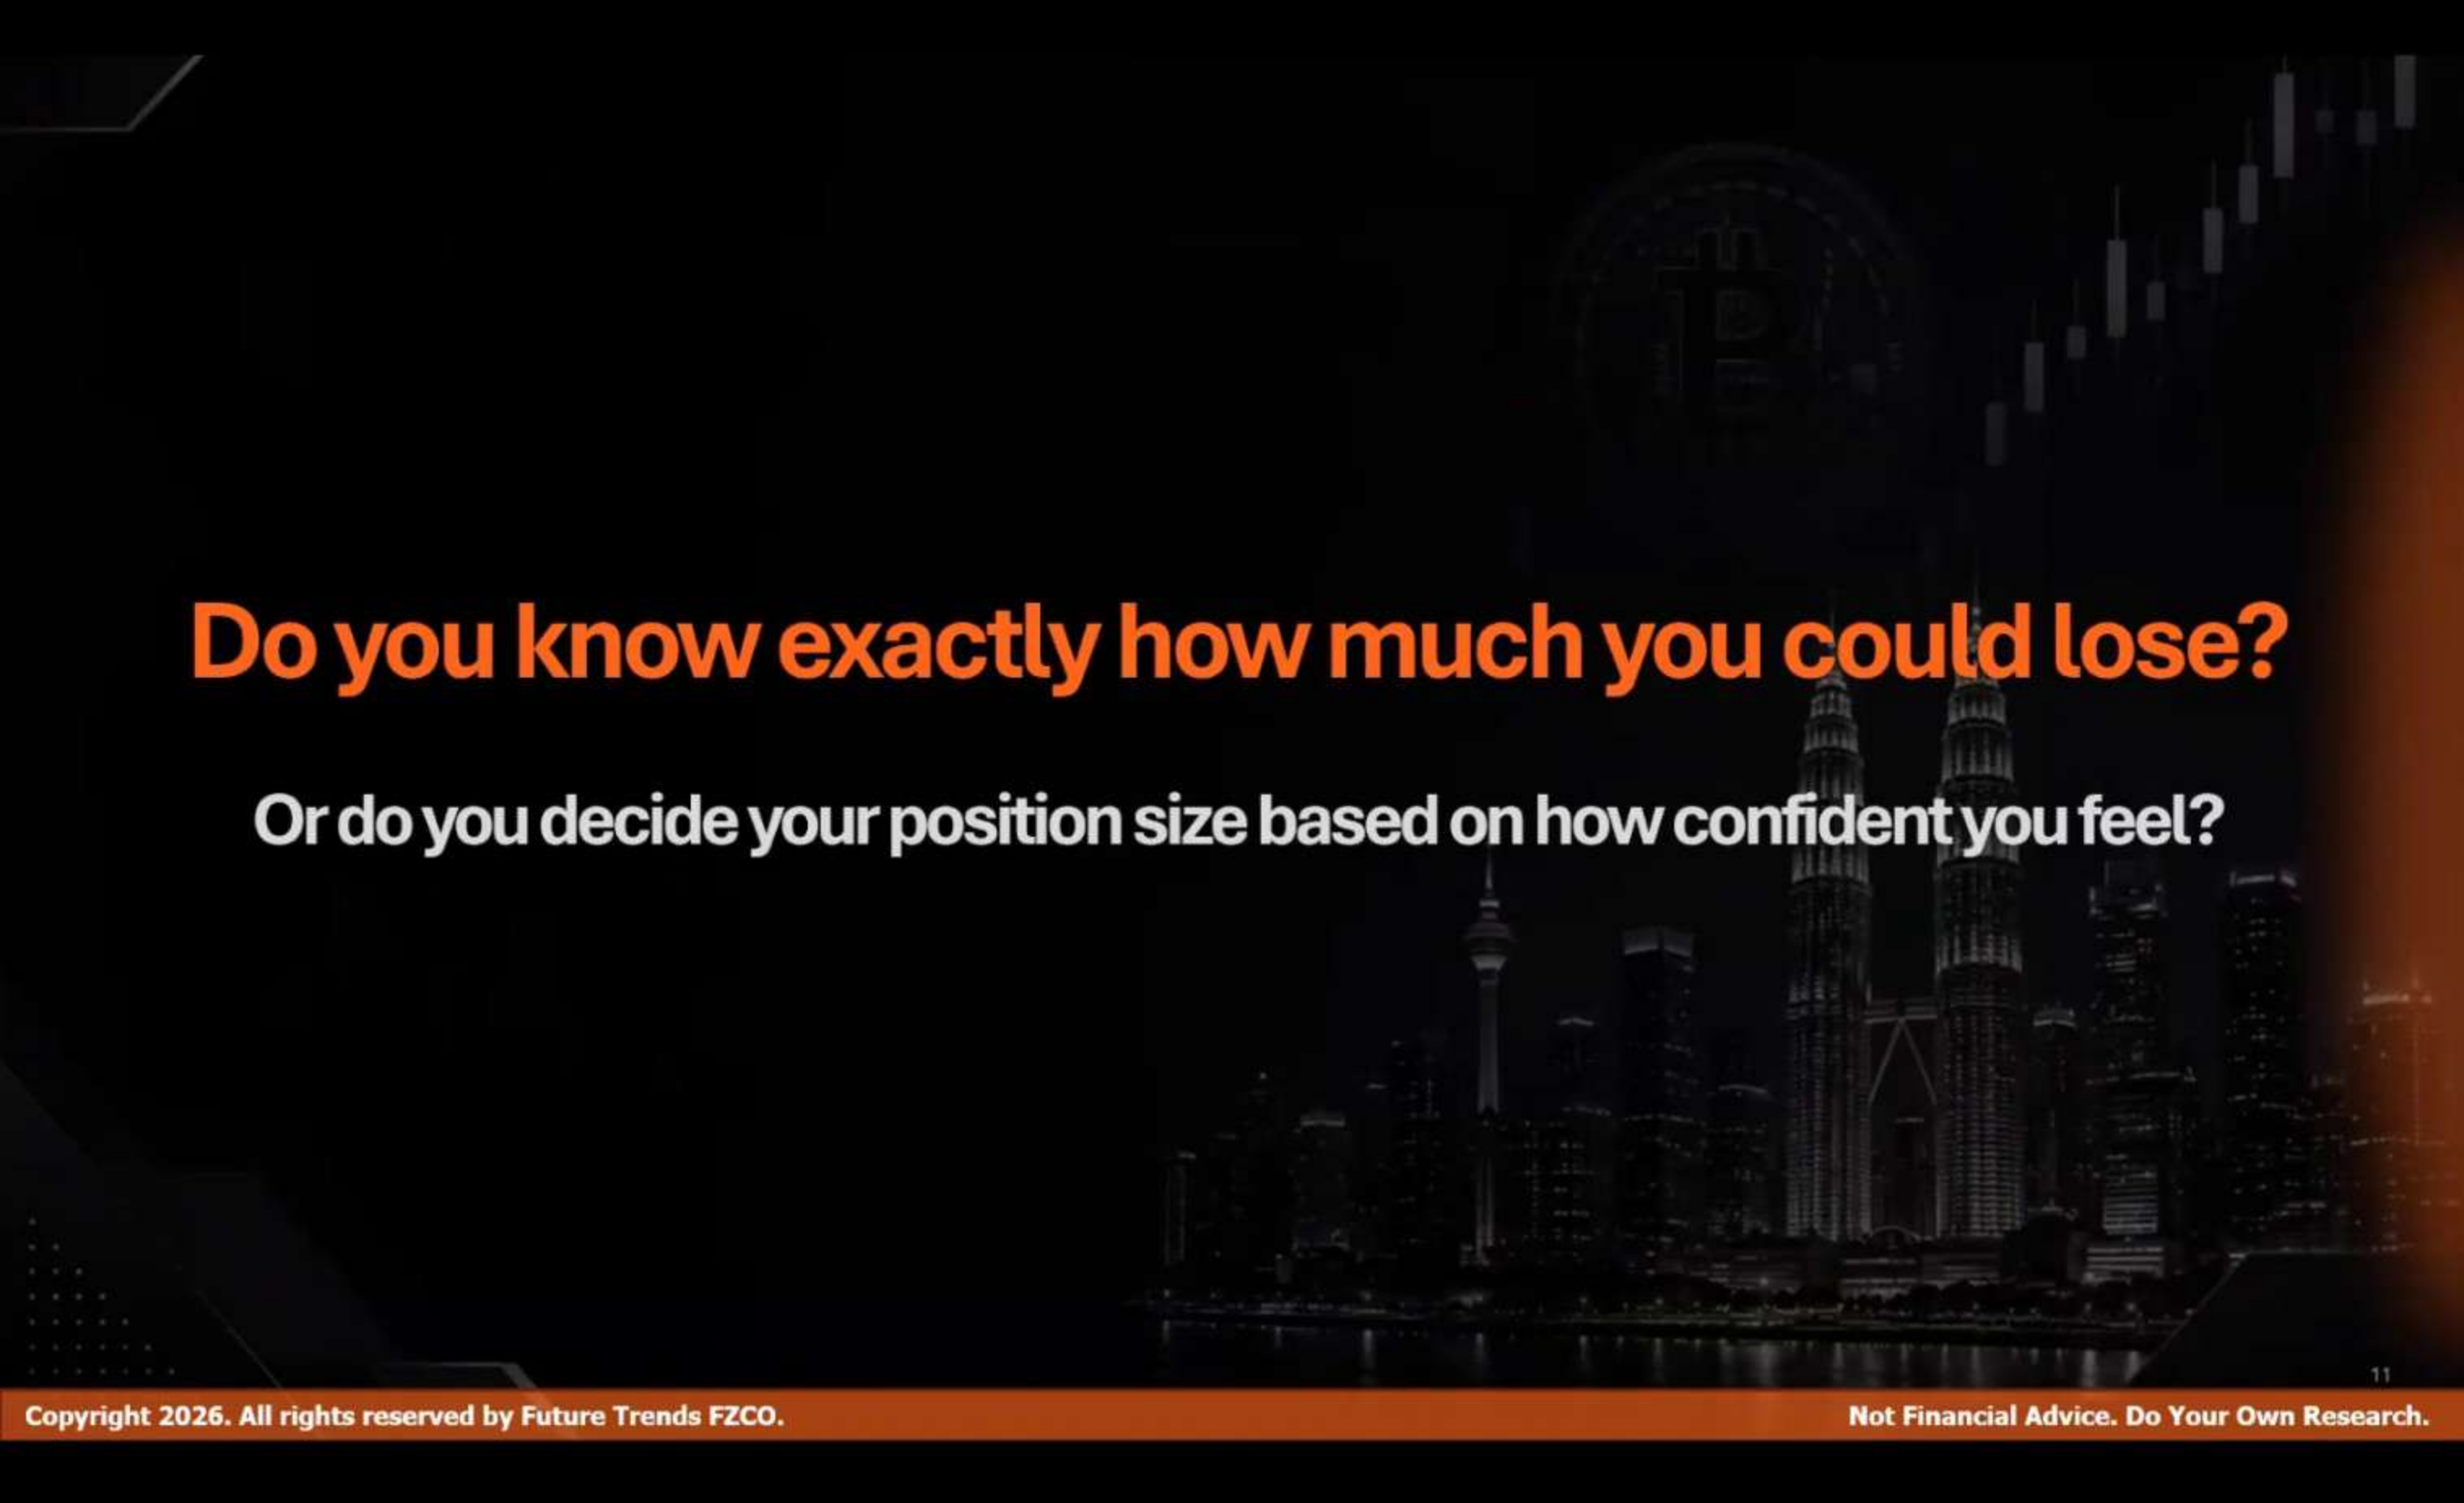

Right Trade , But Take Profit Too Early ?

You exited early, then watched the price pump without you.

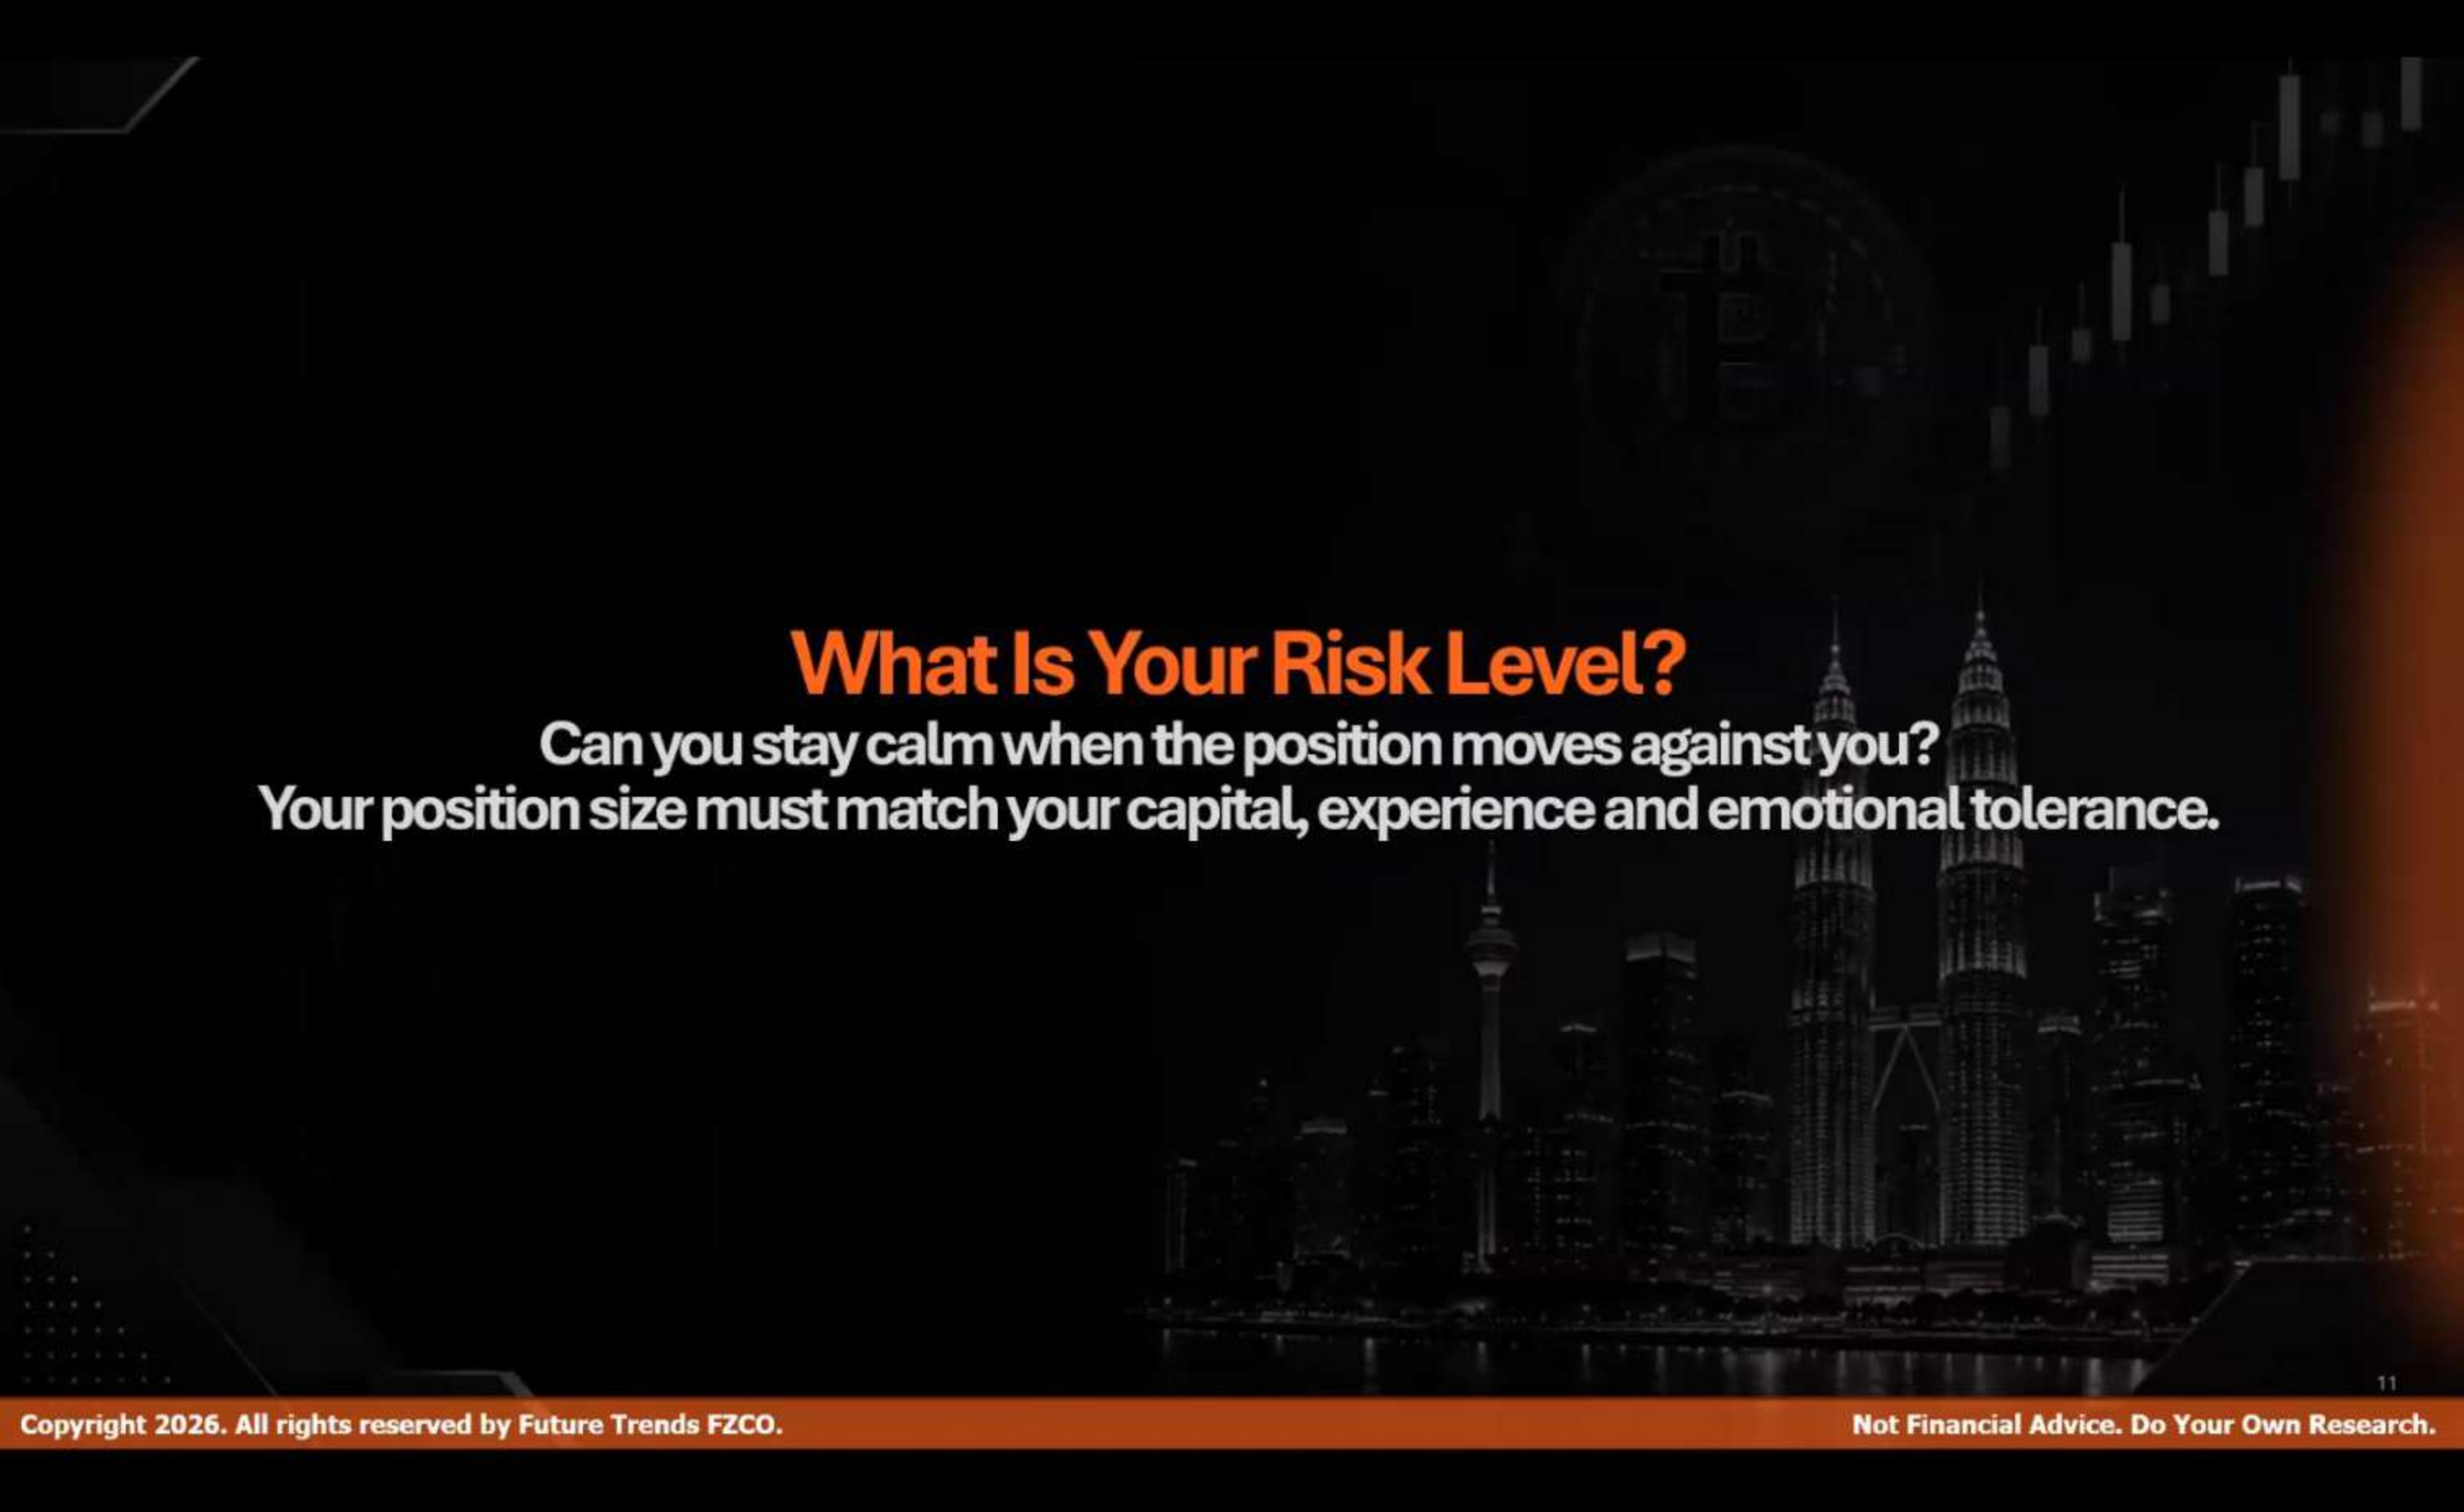

The Problem Wasn't The Trade

*Your direction and entry (Diagnose) may be correct
The wrong position size (Dose)
created too much pressure to hold*

Do you know exactly how much you could lose?

Or do you decide your position size based on how confident you feel?

What Is Your Risk Level?

Can you stay calm when the position moves against you?
Your position size must match your capital, experience and emotional tolerance.

Enhancement of Risks Management

Basic Trading Concepts	Explanation
Isolate Mode	- Isolate Mode: Allows you to allocate a specific amount of funds to each trade individually. This helps protect your other trades from affecting each other.
Cross Mode	- Cross Mode: Uses your entire account balance as margin for all trades. It provides flexibility in position sizing but increases the risk of liquidation.
Leverage x	- Leverage x: Indicates how much your position size is amplified compared to your margin. For example, "Leverage 10x" means you're trading with ten times your margin.
Liquidation	- Liquidation: Occurs when your account balance falls below a certain level, resulting in automatic closure of trades to prevent further losses. It's essential to manage risk and set stop-loss orders to avoid liquidation.
Derivative Account	- Derivative Account: Used for trading derivative products like futures contracts. It allows you to speculate on the price movements of assets without owning them.
Funding Account	- Funding Account: Stores your funds for trading. You can deposit and withdraw funds from this account to fund your trades and manage your overall trading capital.

Chloe Ong 06/06/2024 18:13

Dr Aaron did teach hedging in the zoom class.. u may check back what's his rules.. I follow exactly the same.

Only thing is I do put higher capital than what he taught (I'm a risk taker) because I want it to be reach balance point faster.. but it's only when I see it's really dump/pump so hard non stop and no u turn already.

👍 2 🌈 1 🙌 2 💎 1

janejaen 06/06/2024 19:16

looking at the bright side , this shld be isolate trade, ur wallet is safe 🌈 cross, will go beyond if no SL & might lose all ur fund if not enough to hold liquidation. Anyhow Beer is very volatile , might consider quick cut loss & re-enter better position to make back , also can scalp in smaller range. if u cut loss 1R , make 4R in re-entry , youre still winning 3R. if u want to hedge, jst be a little careful, isolate with high leverage can get liquidated easily before hedge to equivalent. 5x is a very patient trade, you've gt the patience. so dont give up. it's a good learning experience 💪🐻

🌈 2 🙌 5 💎 2 🌈 1

Enhancement of Risks Management

- **Take care of trade by adjusting:**
- **-> Isolate with leverage and SL (Stop Loss)**
- **-> Cross with leverage and SL**

Isolate -> if liquidated, only loss the capital you put, derivative wallet USDT still preserved

Cross -> if liquidated, not only loss the capital you put, total amount in derivative wallet USDT will be liquidated (Burst!!)

Isolate with 5X -10X leverage, as it can be adjusted. The smaller your leverage X, the higher the liquidation range.

SL (Stop Loss):

- **Beginner (Low risk taker) 5% -20%**
- **Intermediate (Moderate risk taker) 20% -50%**
- **Advance (High risk taker) > 50% above on the amount that comfortable**

Enhancement of Risks Management

- **SL to Entry once Partial TP (PTP)**
- **Moving SL/ Hunting SL**
- **-> Set % that you prefer in order for it to have more space for the Wick to hit without triggering your SL easily.**

- **FORMULA:**

Eg: Take 20% Profit, left 80% for the Wick

Entry Price: $2.814 \times 20\% = 0.5628$, then $0.5628 \div (25X \text{ Leverage}) = 0.022512$

Entry Price: $2.814 - 0.022512 = 2.791488$ (Set as Trigger Price for SL)

Eg: Take 60% Profit, left 40% for the Wick

Entry Price: $2.814 \times 60\% = 1.6884$, then $1.6884 \div (25X \text{ Leverage}) = 0.067536$

Entry Price: $2.814 - 0.067536 = 2.746464$ (Set as Trigger Price for SL)

🐼 6

There is
no always 100% guaranteed method
in future trading especially during the news,
fomc, or unexpected market events

在期货交易中，并不存在**100%**百分之百的必胜方法，
尤其是在有新闻、**FOMC**或市场意外事件发生的时候
要稍微谨慎。

1% RISK RULE = 1,000 USDT

$$\text{Total Wallet} = \frac{\text{Risk Amount}}{\text{Risk Percentage}}$$

Given:

- Risk Amount = 1000 USDT
- Risk Percentage = 1% (or 0.01 in decimal)

So, the total wallet should be:

$$\text{Total Wallet} = \frac{1000}{0.01} = 100,000 \text{ USDT}$$

If 1% risk equals 1000 USDT, the wallet should be 100,000 USDT.

High-Capital Trading Risk

Alfm66 ⚡ FT 29/05/2026, 18:45

How do u achieve these sort of results? 🤪

janejaen 31/05/2026, 20:17

@krpytokat 🙏 Dr @AARON 's super power 🤪

148.5USDT 🤪. Was late, so manage risk with small size and took a quick trade instead.

If you're early & have time to manage the trade, you can always scale bigger 🌈

💪 1 🙏 1 🤪 1

“How much money am I risking each trade?”
“Small capital can start?”
"Small capital cannot make meaningful returns
from trading.”

Wrong.

Capital size does not determine your result.
The correct **DOSE (D)** does- how much you putting in for a trade.
The percentage is identical.

Case study: Small capital discipline

“I do not have big capital ”

Full time
Undergraduate Student
Zero income
Zero experience

Case study: Small capital discipline

“I do not have big capital”

Before Structure	After Structure
● Total beginner, no income ● Couldn't afford expensive courses ● Zero trading capital	 ● Started with US\$150 (≈ RM 636) ● Grew to five-figure accumulated profits ● Used extreme speed, precision, and risk control over two years

Capital is not bottleneck – skill is

chickenoyster 21/07/2025 23:39

Hi Dr.Aaron, 好久不见。我这几个月沉寂了好久，但现在有件事情必须要跟你分享。我刚从mybw的deepblue event离开，刚刚还跟Jonathan和其他FT的伙伴们打了个招呼。我上车开了我的交易单子，我无法形容我的心情，但第一个就想跟你分享，我就直接send你看图吧

Small Capital vs Start Small Win Big (SSWB)

Common people

- Feel capital too small
- Overleverage to grow fast
- One loss hurts badly

Our Students

- Start small
- Trade with structure
- Scale with discipline
- \$150 trade capital method
- Risk control first
- Grow through execution, not gambling

**How much capital
do you think
to start this TRADE?**
