“Trading can't make you rich overnight but it is the best business in long term.”

Always Use A Stop Loss

Stop-Loss Orders are designed to limit an investor's loss on a position

Behind every consistently profitable trader there is a lot of losses, mistakes and lessons learned.

trade the day

#SSWB (Start Small Win Big)

1. **Initiate** the Capital starting with **\$20** as an trade.
2. Choose the Coin with active **Volatile** and **Volume %** usually from Gainers.
3. By using **MMT Coins and Trend Screener** as **SOP** to decide the trend.
4. Enter using **MMT SPE** and set the **MMT Wick tracker** to **50% = \$10** (buffer 55%-60% for the closing fee coverage). Sometimes you may set to the lower level than previous high wick spike, then you may gain more profit than 50%.
5. It may take up to 30mins -1Hour (or even more sometimes dependent the market volatility and volume change - especially contains wick candles).
6. Once the **TP** with self closed profits, immediately transfer your profits from **Derivative account** back to **Funding account** to keep it securely there.
7. And then routinely repeat the **Step No. 1** again for next round up to **10 trades** in a short period of Scalping. Sometimes, you may reach up to target earn of **\$100** even before reaching 10 trades. **Stop trading and rest** well.
8. Remember, **DON'T Hold** for Longer time.

What Will You Have When implementing DOSE (D):

- Knowing how much money you risking**
- Can grow from small capital to big profits**

What Will You Have when implementing **DISCHARGE (D)** :

- **Partial TP / Breakeven plan**
- **Hedging when suitable**
- **Exit discipline**
- **How to protect your trade when the market moves fast**

How to salvage your trade with horrible position?

HEDGING Method?

Hedging is a financial strategy aimed at reducing or offsetting risks in an investment portfolio by taking opposite positions in the market. It is used to minimize the impact of uncertainty and market volatility on investments.

Through hedging, investors can simultaneously hold long (buy) and short (sell) positions in the market to protect themselves from price fluctuations. Hedging can provide a protective effect when market conditions are uncertain or when there are potential risks.

Common hedging strategies include futures hedging, options hedging, and derivative hedging. For example, a stock investor may purchase a corresponding number of stock index futures contracts to hedge against potential losses in their stock portfolio during a market downturn.

Hedging does not necessarily eliminate risks entirely, but it can reduce portfolio volatility and potential losses. It is a risk management tool that helps investors maintain more stable investment outcomes in uncertain market environments.

When the Trade Goes Wrong You Still Have a Plan.

1

LONG
(You want price up)

Entry

Price goes **DOWN**
Your **LONG** is in loss

2

LONG
(In Loss)

+

SHORT
(Open to Hedge)

Open SHORT

You open **SHORT**
to hedge your **LONG**

The Analogy: Trading is like car safety system

“Poor protection” system will destroy you..

Go kart crash without
backup protection

Seatbelt without roof.
1 crash will end like liquidation.

Military tank with
full protection

Bulletproof, multi layer protection.
Survive multiple crash.

Advance Risk Management

MMT Hedging

- When setting a trade with Cross position, don't maximise the leverage X.
- Set lower or moderate leverage first

FORMULA:

- If you lose the trade < 50%, can Hedge by opening counter trade by putting extra 50% of your initial capital amount.
- If you lose the trade > 50%, can Hedge by opening counter trade by putting extra 100% of your initial capital amount.
- Remember that both of above condition followed by increasing the leverage X level to maximal level to counter hedging higher to compensate your loss.

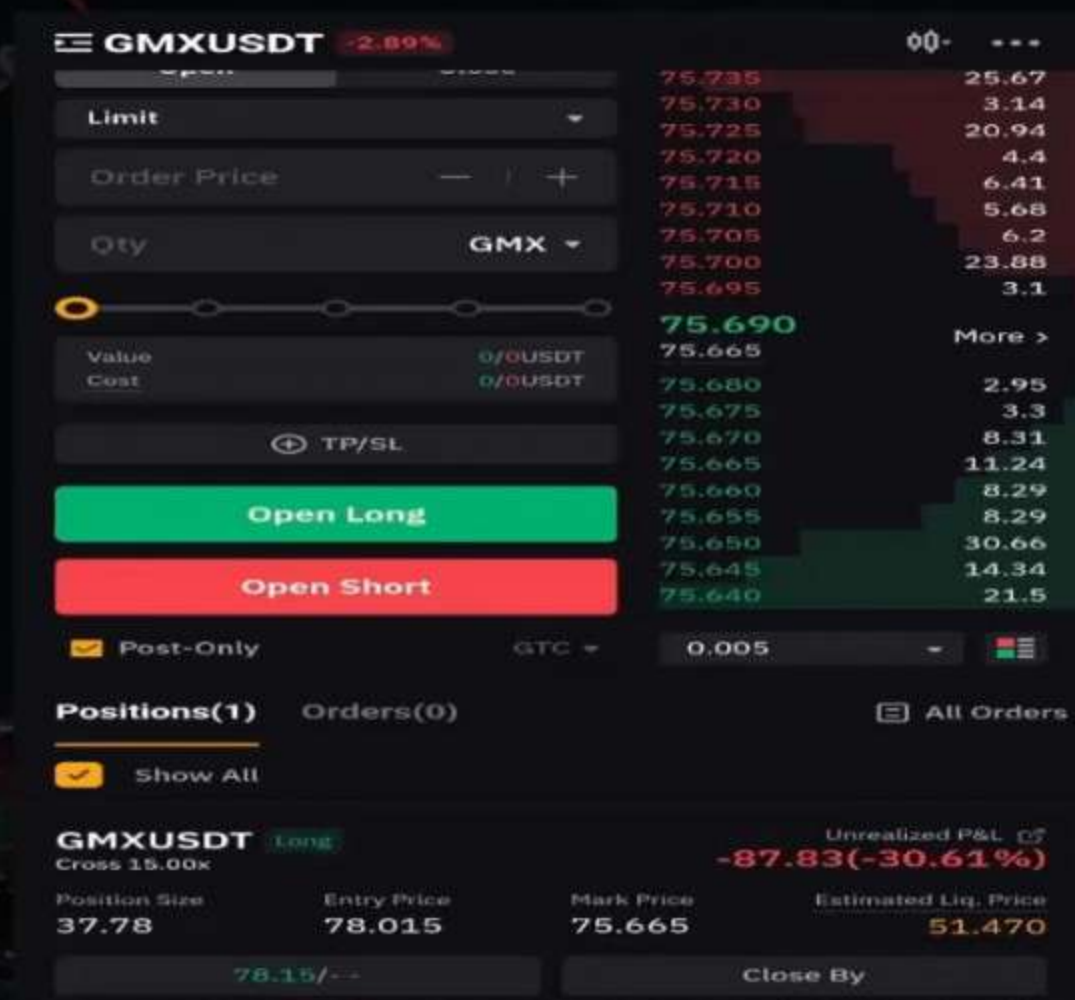

Hedging

- Im here to share a case study of my own that i bought **GMXUSDT for LONG** on 16/3/23. Then i had a **paperloss of up to -180USDT**.
- But i did not close it as i want to recoup my loss. So i kept it until today morning. Went thru the whole market volatility.
- Then finally, i waited for my chance which was this morning market pumping in **Long position**.
- Finally, i saved my loss & managed to close it without paying any single loss.

Hedging

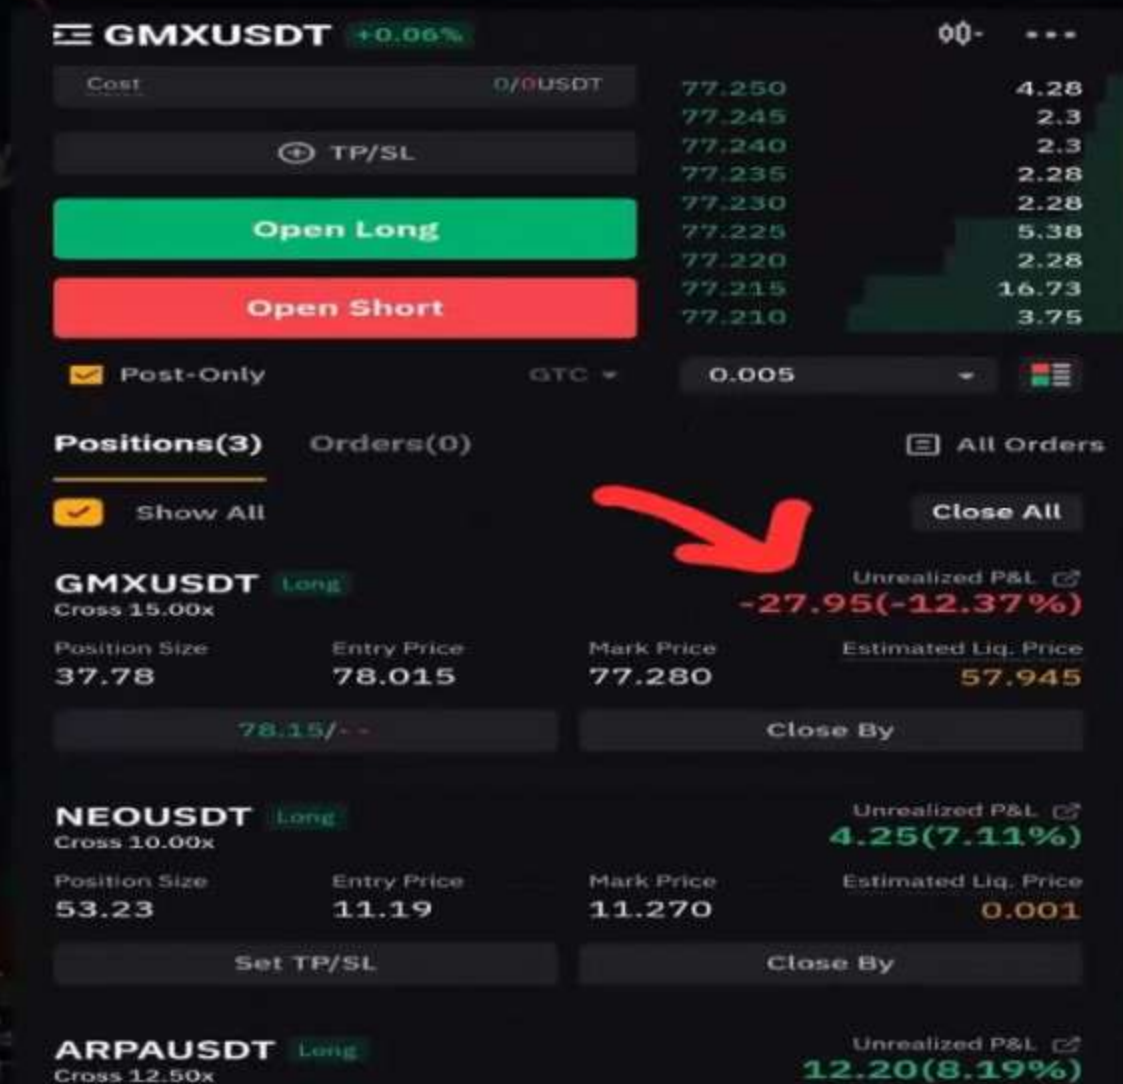

- You can see how big the gap was since my loss uptill -150USDT as my initial entry price was 78.015

- This morning the price returned half of my loss due to LONG positioning of the market trend.

Hedging

- Then the nearer the gap is, the lower my loss being reduced.
- Price dropped further & returning back to entry price.

Hedging

- **Finally the Hair / “wick”**
- **(影线) touched back my entry price, then i totally saved my loss!! Phew...**

Lesson of my sharing:

1. Pls Set SL (**Stop Loss**) eventhough the market is Happy in your way of position.
2. Never give up to retrieve your loss -> gain. So, dont let your frustration to close the position so early just to save your headache.
3. Limit or Do Now new position of the day & look for the potential "market call" to standby & retrieve yr loss by closing it when reaching back yr initial entry price.
4. Hold your breath & manage your **EQ** & be patient to the next market come.
5. At last, **DONT BE TOO GREEDY!!** You may be a little bit greedy if you ready in front of your screen to close up the position in any time it reaches your desire closing price/profit.

Case study :

Linda
9am – 7PM
Business Lady

50's beginner
Struggled losing trade

Case study :

Before Structure		After Structure
	Terrified to hold trades	Uses the MMT Hedging Safety Pin
	Every wrong trade became a full loss	Can break even or earn on trades that previously caused massive panic
	Constantly losing confidence weekly	Protects capital calmly

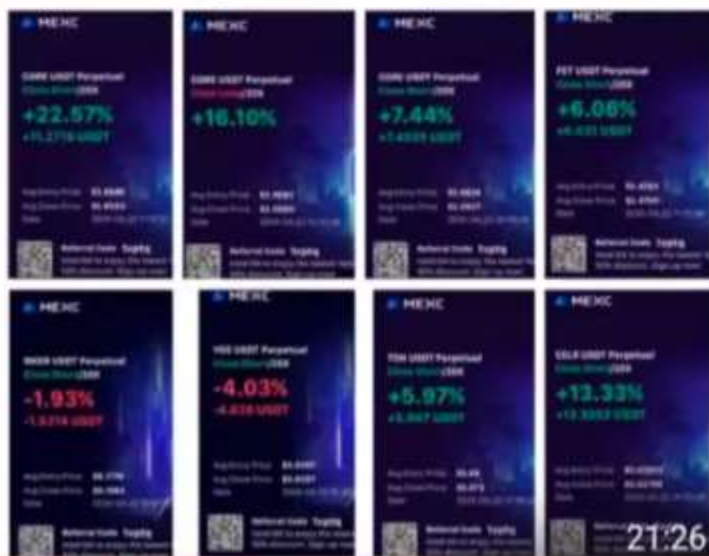

Case study:

Linda learned to survive losing traders

← MMT VIP2 LindaJong

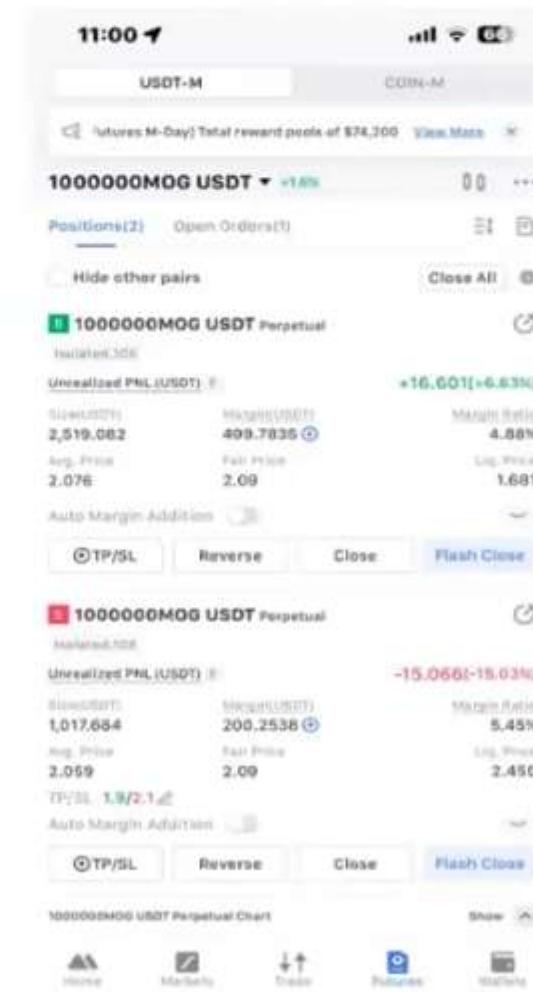

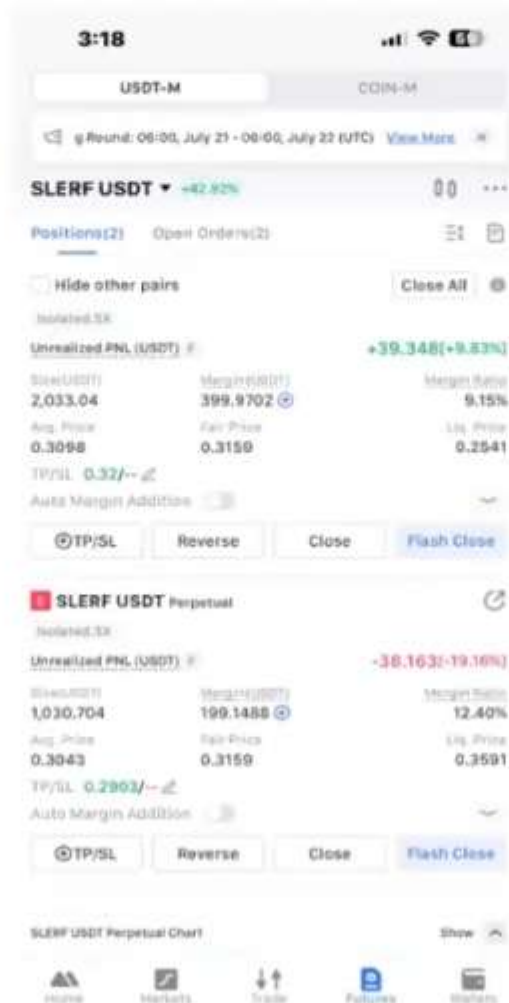

Hi Dr. Aaron
Thanks for allowing me to have personal coaching soon.
Today, start practicing trading using smaller timeframes, like 15 minutes, 10 minutes, and 5 minutes, instead of a 1 to 4-hour timeframe.
Here are today's results.

21:26

@Dr. Aaron

After attending the one-to-one coaching session with Dr. Aaron, I learned that **Hedge Mode** is the best strategy. Whenever you enter a trade and happen to be losing money, this technique can help recover the trade; here are some of my trade examples. (Trader: Linda J.)

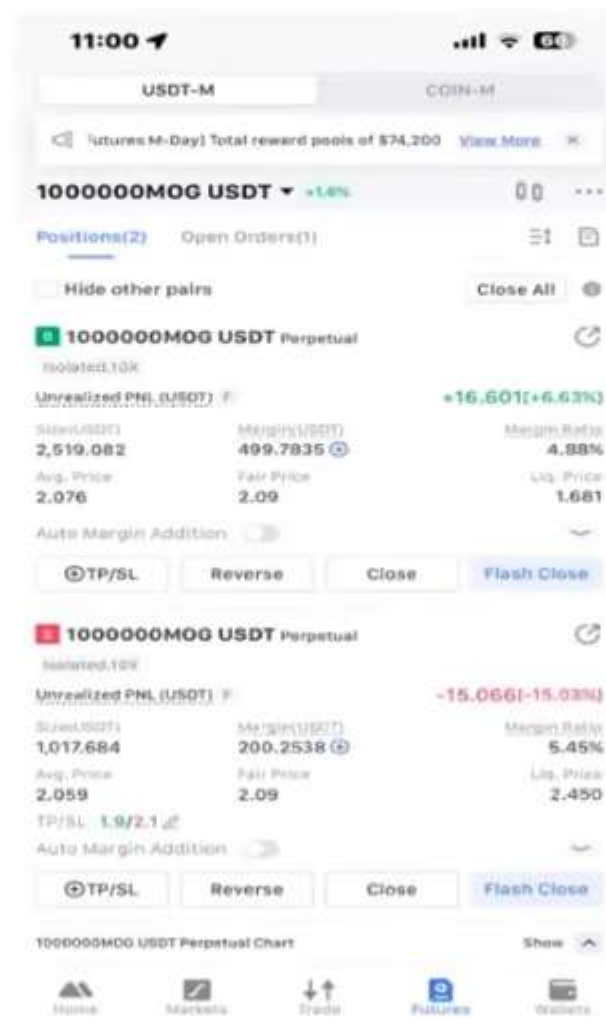

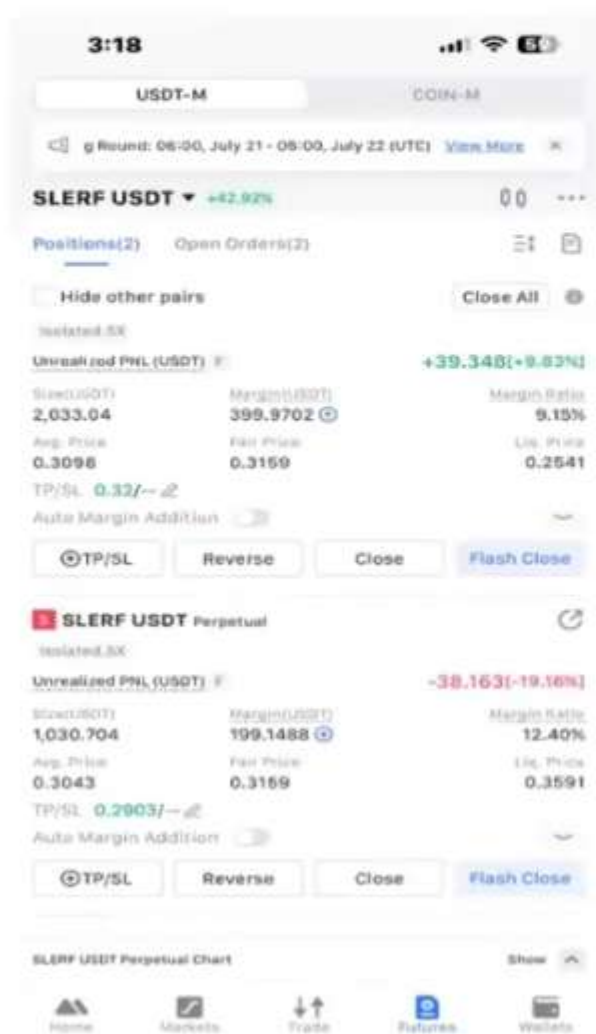

Real example: Hedging Losing Trade

You're not losing, if you have the right strategy

@Dr. Aaron

After attending the one-to-one coaching session with Dr. Aaron, I learned that **Hedge Mode** is the best strategy. Whenever you enter a trade and happen to be losing money, this technique can help recover the trade; here are some of my trade examples. (Trader; Linda J.)

Thank you for sharing Dr @AARON . Recover back with a bit of profit. sakit jantung sudah.

Thank you also to always ...more

What Will You Have when implementing **DISCHARGE (D)** :

- **Partial TP / Breakeven plan**
- **Hedging when suitable**
- **Exit discipline**
- **How to protect your trade when the market moves fast**

MMT Golden Rules (Follow up)

1. If the market too volatile with sideways trend, but with high volume %. Please **DO NOT** consider to trade this kind of coins or hold too long.
2. How to earn from trade? (Not just ROI%). You need to consider FR (Funding Rate) as earning revenue is different. Eg: whenever closing the trade, please look at the expected profit with actual shown profits, are actually slightly different.
3. **"Close & Go"** & then **"Open & Wait"** the next potential coins.
4. **All NEW born** coins only need to trade for **FEW Days** and **AVOID Keeping** long duration.
5. **Do frequent** Long & Short **Scalping** will help to **Earn FASTER** (for those who can monitor the trade)
6. **DO NOT Hold** the coin too long as we are not doing Swing Trade & must observe the volume %

MMT Golden Rules (Follow up)

7. **Bigger** Wallet --> **Smaller** Trade will **Last Longer**.

Smaller Wallet --> **Bigger** Trade will **NOT Last Longer**.

8. PTP (Partial Take Profit) & SL (Stop Loss) to Entry VS Awaiting TP ; Hunting SL

9. To know the trend of **New Born Coin**.

10. We can actually make money with small capital and flipping own wallet.

11. Let's become a "Wick Player"!! -> How to do : "**Wick Catcher**" without a Master?

12. Remember , **10%** is the **Strategy** ; BUT **90%** is the **MindSet**.

Advance MMT Sniper Entry & Exit

- MMT SPE (Sniper Price Entry, SPE) (狙击价格入场), Diagnosis
- MMT Take Profit Strategy, Discharge
- MMT Wick Tracker (烛芯跟踪器), Discharge

MMT Sniper Price Entry (SPE)

- **Use SMC indicator**
- **Define where is the Supply & Demand zones & any FVG in Trading View**
- **If there is any,**
 - **aim at the bottom of Supply Zone if planning to SHORT**
 - **aim at the top of Demand Zone if planning to LONG**
 - **same as FVG to become the baseline of it**
- **After that , go back to Bybit and then AIM it at the nearest 5 lines EMA and enter the point accordingly.**
- **** Sometimes, the aim can be higher than Demand Zone on the 5 lines EMA ; and can be lower than Supply Zone on the 5 lines EMA**

MMT Take Profit Strategy

(MAVol + MACD

+ Take Profit/ Mãn Mãn Tiệp)

-> Sip the profit slowly

MMT Take Profit Strategy

**When the
Volume
hits
maximal**

**Observe
MACD**

**Choose
the mid
Histogram**

**Then TP or
PTP 75%,
set SL to
entry or
Hunting SL**

**Do not be
Greedy!!**

MMT Wick Tracker

- To use the possible Wick hit level as the guide of the TP entry & when Wick hits, then it automatically self TP and close trade.**
- No need monitoring**

What happens if you skipped One D?

What happens when you...

Skip DIAGNOSE -> *What the chart was saying*

△ SKIP DIAGNOSE — WHAT THE CHART WAS SAYING

Price declining · EMA pointing down · Death Cross already formed

The signal came in. You entered. No chart check.

- ✗ EMA 50 was pointing **down**. The chart was in decline before you entered.
- ✗ The Death Cross had already formed. The diagnostic line said **stay out**.
- ✗ You blamed the signal. **The signal was not wrong. The timing was.**

A doctor who prescribes without diagnosing does not blame the medicine when the patient gets worse.

What happens when you...

Skip DOSE -> Right Trade. Wrong Size. Could Not Hold.

△ SKIP DOSE — RIGHT TRADE. WRONG SIZE. COULD NOT HOLD.

EMA confirmed. Entry valid. But you went in too heavy.

✗ **EMA confirmed. Entry valid. But you went in too heavy.**

✗ **The trade dipped 3% - a normal pullback. But it felt like a disaster. You panicked and cut.**

✗ **After you exited – the trade ran exactly where you thought it would. Without you.**

A doctor who prescribes 10x the correct dose does not get 10x the result.

What happens when you...

Skip DISCHARGE -> Won the trade. No Exit Plan. Gave it All Back.

Perfect entry. Correct dose. No exit plan.

△ SKIP DISCHARGE — WON THE TRADE. NO EXIT PLAN. GAVE IT ALL BACK.

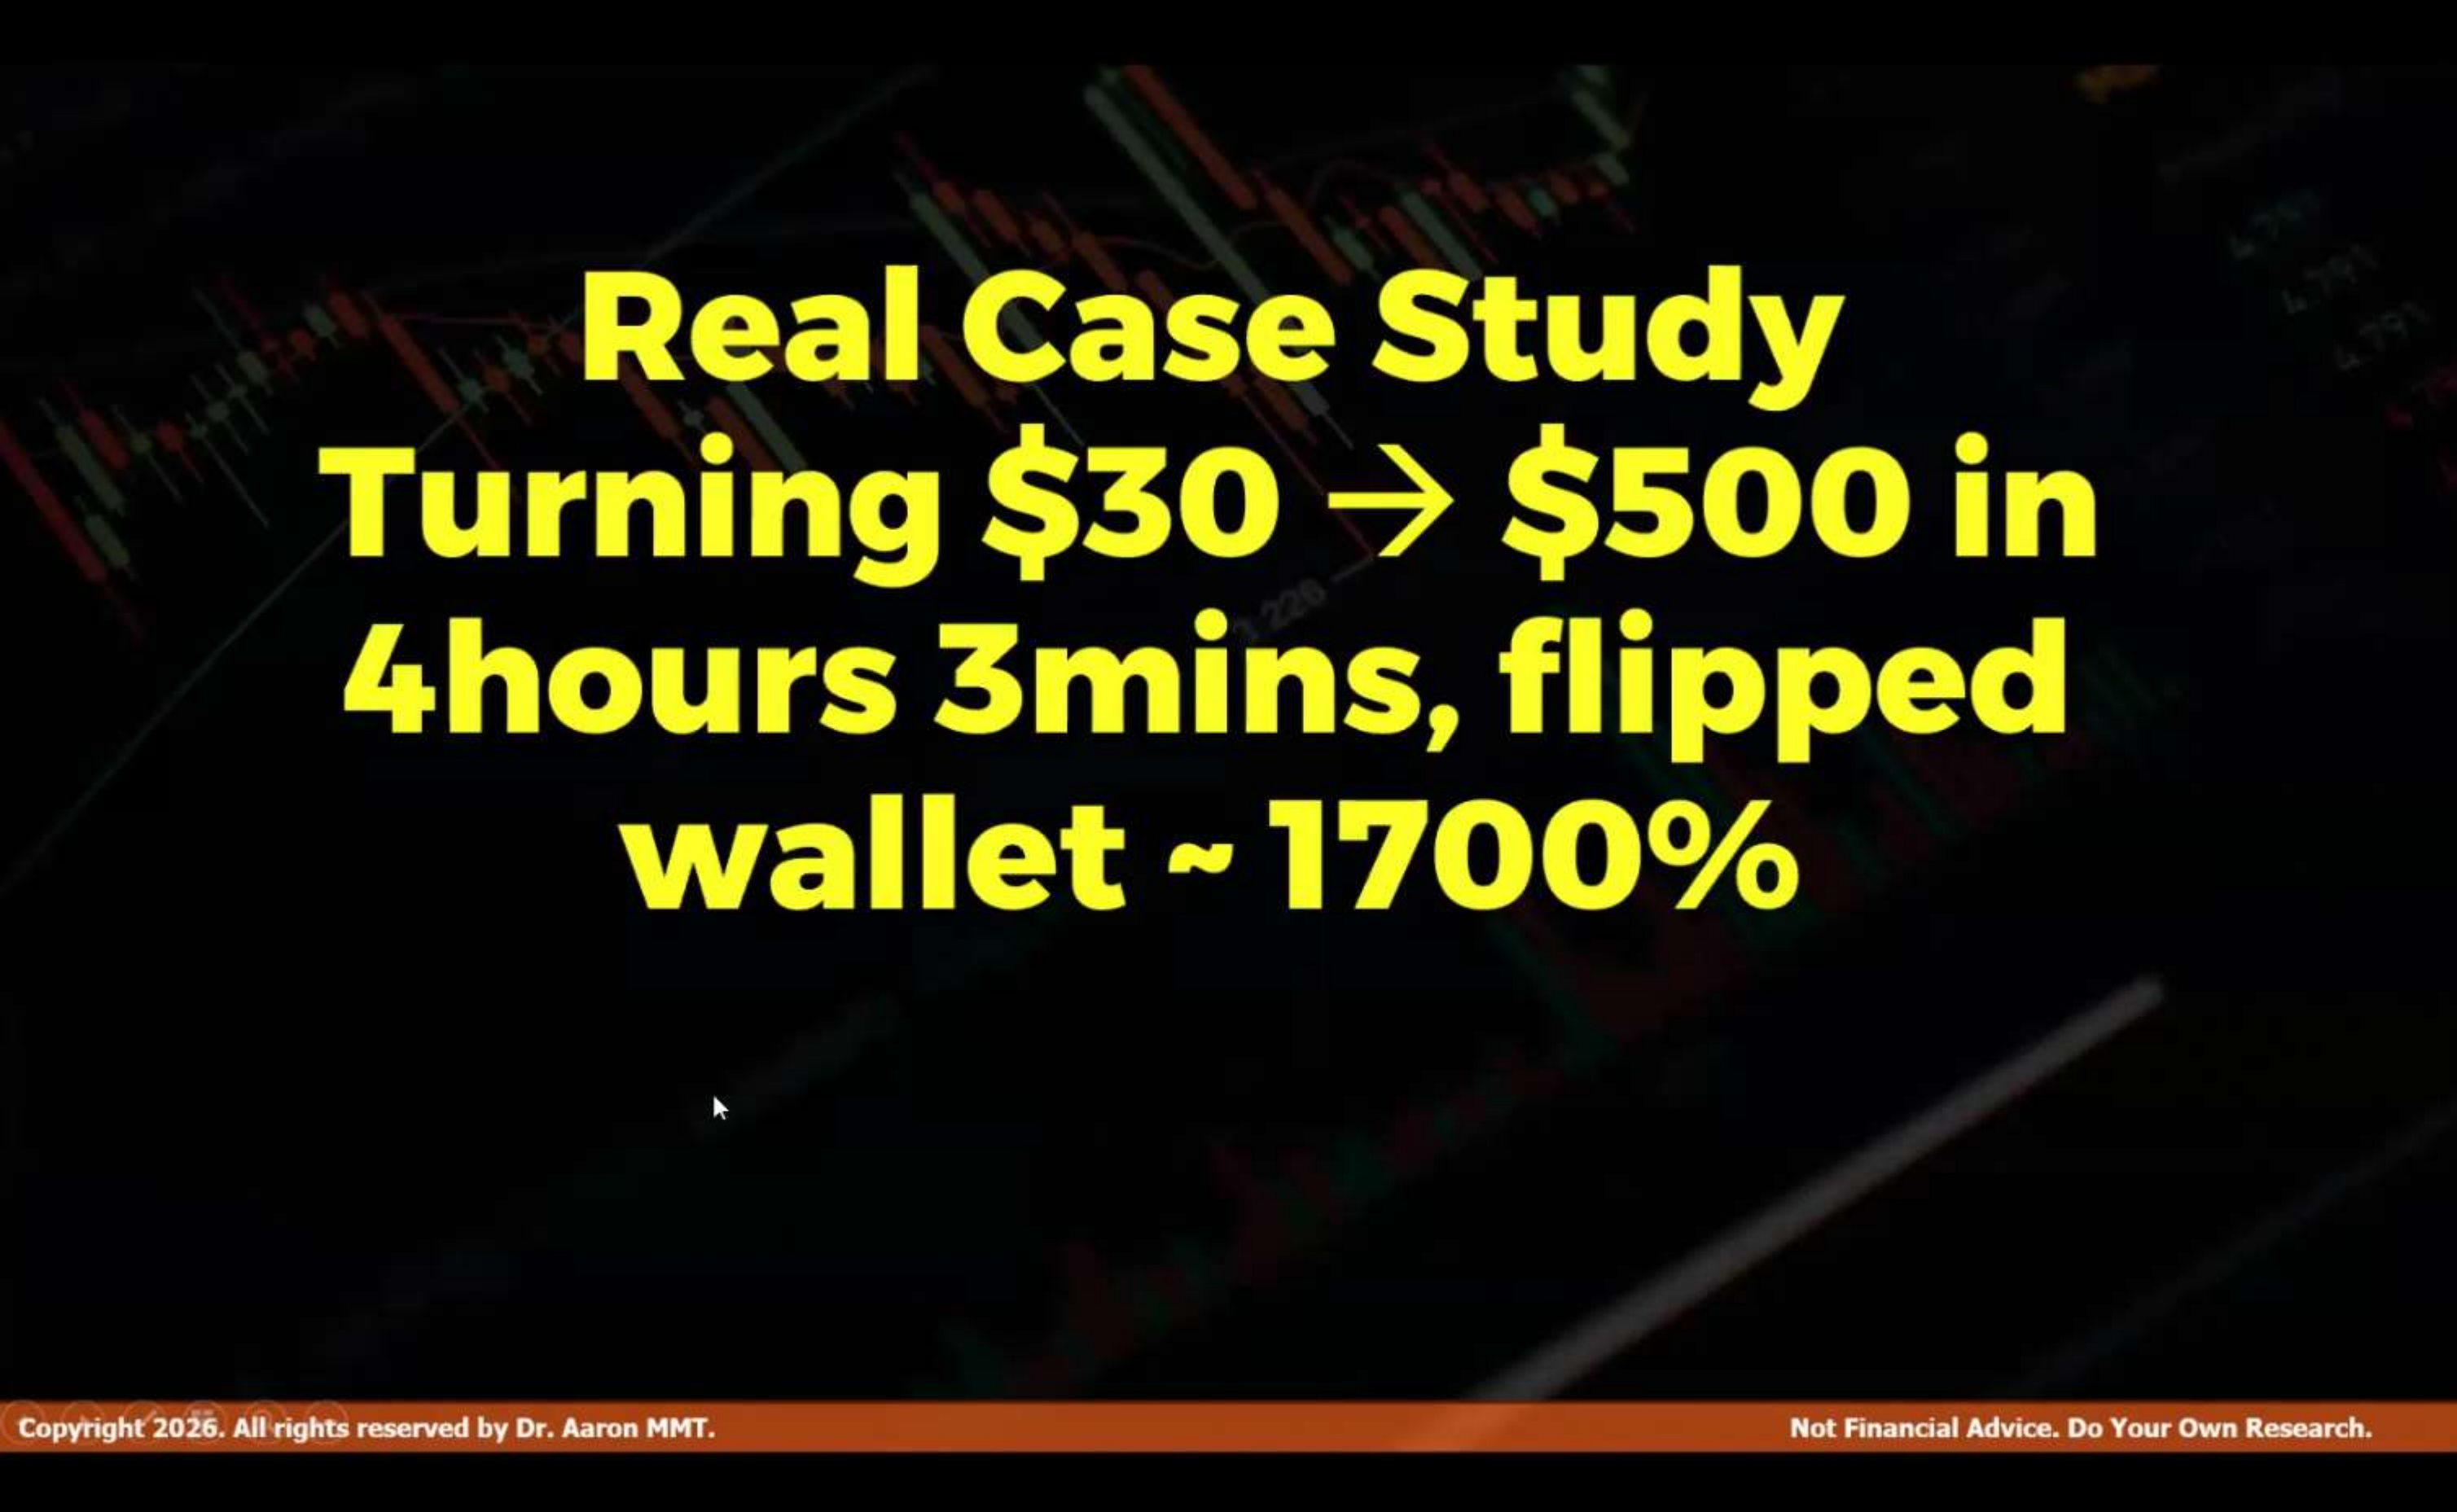

✓ The trade went green. RM200. RM400. RM600.

You thought — let it run a little more.

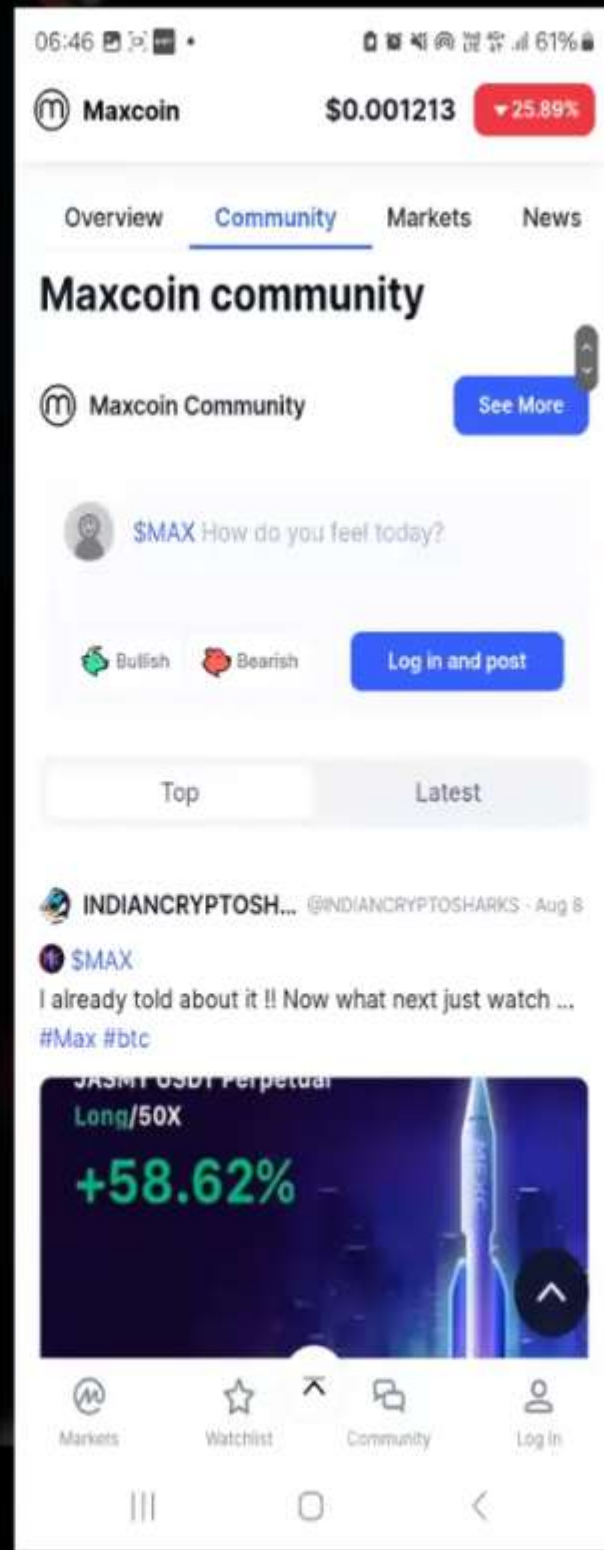

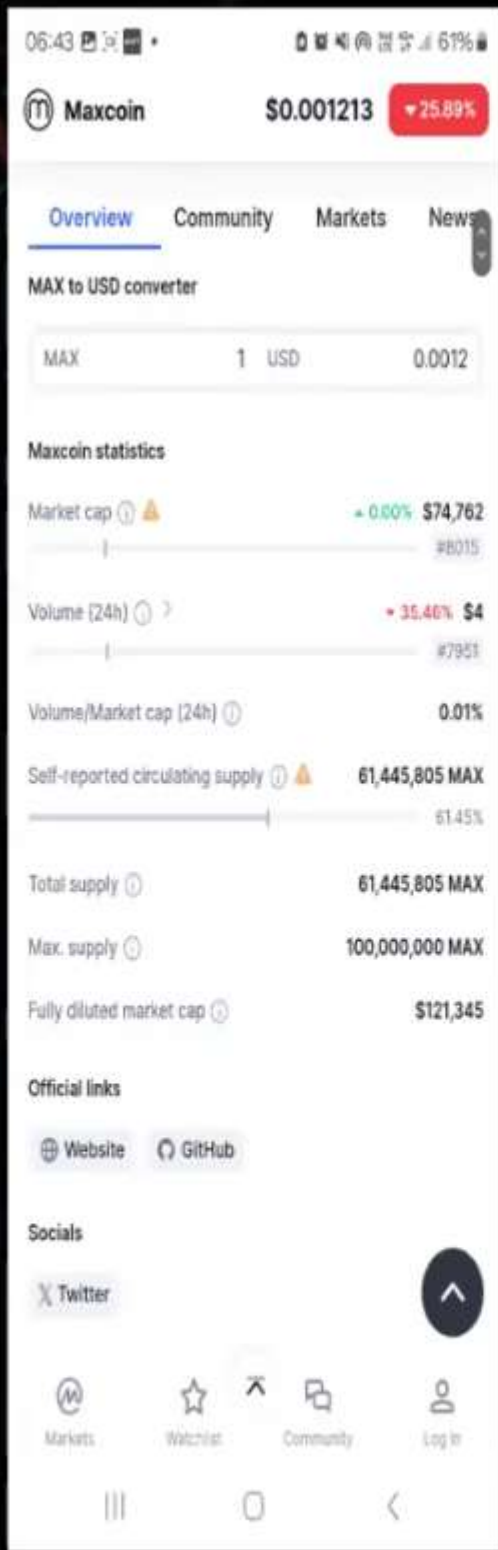

✗ It reversed. Fast. No take profit was set. **You gave back everything.**

✗ The EMA exit signal fired during the reversal. You had no discharge condition — so you held and hoped.

A doctor who admits a patient but never writes the discharge plan keeps them in the hospital indefinitely.

@JQ360 Thanks for the Mubarak educational post — so that we know what to do when CZ call for Mubarak 🙏

Missed the first entry,
but never too late to ride back in 🌈

Wishing everyone Eid Mubarak

checked, there's no news at all

Trade Call- Case Study

Started the trade with initial capital of less than \$40.

Initially plotted the entry at 0.06373

However, noticed the point changed in between the EMA55 & EMA155, furthermore it's pumping higher.

Trade Call- Case Study

Skip to next 2nd SMC slide 1. → (finished all then only come back to this slide). Then after coming back here Slide2 , I was expecting to be triggered as my SPE.

BINGO!! 🍷💪🔥🔥 then move forward 2nd slide 3 ➡

Trade Call- Case Study

Slide 1, I immediately moved my entry price changed to 0.06609 which is falling at EMA55, then backwards to last 2nd slide 2 ←

Slide 3, seems touching now

Trade Call- Case Study

Yup, triggered.
